Animal Signs Activity Sheet

Animals are everywhere, even if you can't see them! But if you are a good detective, you can often find clues that they have been there. These clues are called animal signs. A feather on the ground shows a bird was there. A web is a sign that spiders live there. A footprint or track tells you that an animal passed through that area. What other signs do you think animals leave behind?

Circle the animal signs in the picture.
What animals may have left them?
Draw those animals and color your picture.
